

Business Process Analysis Report

Executive Summary

This report analyzes operational process performance using cycle time, waiting time, SLA achievement, process cost, error rates, rework rates, and customer complaints.

KPI Summary

KPI	Value
Total Processes	100
Avg Cycle Time	2.76 Hrs
SLA Achievement	82.4%
Error Rate	6.18%
Rework Rate	4.32%
Total Process Cost	\$845.7K
Productivity	92.5%

Bottleneck Analysis

High Delay Activities

1. Approval Review
2. Document Verification
3. Data Validation

Root Causes

- Multiple approval layers
 - Manual verification
 - Resource shortages
-

Cost Analysis

Highest Cost Departments:

1. Operations
2. Finance
3. Customer Service

Cost Drivers:

- Manual work
 - Rework
 - Delayed approvals
-

Error Analysis

Major Error Sources:

- Data Entry
- Validation
- Documentation Errors

Impact:

- Rework Increase
 - Customer Delays
 - SLA Violations
-

Complaint Analysis

Main Complaint Drivers:

- Long Waiting Time
 - Delayed Approval
 - Lack of Status Visibility
-

Gap Analysis

Current State	Future State
Manual Workflow	Automated Workflow
Multiple Approvals	Single Approval
High Rework	Low Rework
Slow Processing	Faster Processing

Business Impact

Projected Benefits:

- 25% Cycle Time Reduction
- 18% Cost Reduction
- 35% Error Reduction
- 20% Productivity Increase

Final Recommendation

Implement process automation, workflow standardization, SLA monitoring, and real-time dashboard reporting.
